Laser-signed seals from Seal Concept

Laser-signed seals with a high-tech CO₂ laser marking system

- Permanent and material-friendly marking, labeling and engraving of plastics, wood and paper on an area of up to 75 x 75 mm.
- With our CO₂ laser marking system we are able to engrave multi-line alphanumeric information, graphics, symbols and logos
- Using the laser signature you can clearly identify the manufacturing parameters of each seal we machine
- We only need your desired text, a graphic or your logo as a JPG, BMP, TIF or even better as a vector/EPS file
- The marking of the seals manufactured in our production is an important contribution to the clear identification of the respective seal
- With the marking of the seals, both the manufacturing and, for example, the location of use, area of application, machine, batch, etc., can be clearly and reproducibly documented
- This is particularly important for sensitive areas, such as the food and pharmaceutical industries, as well as the automotive industry

Laser marking

Our CO₂ laser marking system enables flexible marking, according to customer requirements, in the form of texts, consecutive serial numbers, codes, logos and graphics. The processing of the specifications is carried out using modern graphics programs.

Product Benefits & Highlights at a Glance

- Individual marking, even for single seals
- Attractively priced
- Sealing surface remains undamaged
- Excellent font quality, ensuring good readability even after years
- Faster identification of the seals
- Easy traceability
- Comprehensive documentation
- High recognition value and clear identification
- Customization options

Do you have any further questions?

Our technical consultants are always available to provide you with further information. We would be happy to arrange a personal consultation appointment with you at your premises. Of course, you are always welcome to visit us at our location in Bobingen and see our work and our quality for yourself.

Know-how and high technical competence are the precondition for high-quality precision products.
